

PROJECT

The purpose of this scheme is to provide Birmingham Dental Hospital and School with a temporary paediatric dental theatre suite and recovery area.

FACILITY

We are providing the Trust with a turnkey package to include the design and build of the theatre facility and all the associated enabling works. This theatre is being located at the Trust's new Pebble Mill site for a 3-year period.

The facility itself comprised of 5No. modules including a theatre suite, first stage recovery and ancillary areas. This is a completely standalone facility and has been designed to adhere to HTM and HBMs whilst also suiting the client's requirements.

CONSIDERATIONS

One of the limitations on site was the available incoming services – there was a very limited electrical capacity on site and also no available natural gas that could be bought to this location so we had to look at alternative options for the facility. After working closely with the Trust we confirmed the best approach going forward would be the installation of air source heat pumps into a site built boiler plant room.
